Southern California is to day one of

iquid stored in the rocky depths of earth. This prime element was first was a work that did not give promise of jectors had faith and pluck, and there was a chance of success. They took that chance and mark the result. One succass pioneered the way for others, until to-day almost every acre of tellable land is readily seen. Other placer mines in in Southern California is in a fair way of being supplied with water. This grand transformation of the barren waste into tertile fields and beautiful orchards and vineyards, was no m racle; was the natural sequence of hard work, tireless energy and prodigious expense. It is the reward that follows well directed and intelligent effort, and self: its principle is as clearly demonstrated in the workshop, the counting house, the professions and every avenue of mental or physical exertion as it is in this broad and grand scale that has astonished the world. The only difference is, the re- rally known as black sand: compense is greater in the favored sec-

tion of California than that which follows similar enterprises in other portions of our common country. What is true of California, is equally applicable and the latter of platinum, etc. Both J. C. Handy, Member; R. R. Richardson, to Arraons, excepting that with us the anods of iron bave a jet black color, and Member; Fred G. Hughes, Ex-Officio risk is less and the reward far more great.
